Acknowledgement :-

- This project consumed huge amount of work, research and dedication. Still, implementation would not have been possible if we did not have a support of many individuals and organizations. Therefore we would like to extend.
- We would like to thank all my friends , teachers who help us to accomplish this project.
- I would also like to thanks faculties for helping me by giving me solution of difficult errors and giving me good guidance.

System Development Life Cycle :-

Feasibility Study					
	Requirement Specifications				
		Designing			
			Coding And Testing		
				Implementation	
					Documentation
15 days	4 days	20 days	35 days	8 days	2 days

The systems development life cycle (SDLC) is a conceptual model used in project management that describes the stages involved in an information system development project, from an initial feasibility study through maintenance of the completed application. SDLC can apply to technical and non-technical systems.

1. **Study:** The existing system is evaluated. Deficiencies are identified. This can be done by interviewing users of the system and consulting with support personnel.
2. **Requirement Specification :-**The new system requirements are defined. In particular, the deficiencies in the existing system must be addressed with specific proposals for improvement. Other factors defined include needed features, functions and capabilities.
3. **Designing:-** The proposed system is designed. Plans are laid out concerning the physical construction, hardware, operating systems, programming, communications and security issues.
4. **Coding and Testing:-**All aspects of performance must be tested. If necessary, adjustments must be made at this stage. Tests performed by quality assurance (QA) teams may include systems integration and system testing.
5. **Implementation:-**Here we are implementing all our designing and coding phases.
6. **Documentation:-**Project documentation is the process of recording the key project details and producing the documents that are required to implement it successfully.

Admin Homepage : -

The screenshot shows the Admin Homepage. At the top, there's a dark blue header bar with a user profile icon, the word "Admin", and an "Online" status indicator. To the right of the header is a search bar with a magnifying glass icon and a close button. On the far right, there's a user profile icon and the word "Admin". Below the header is a sidebar on the left titled "General" which contains links for Dashboard, Users, Category, Products, Orders, and Feedback. The main content area is titled "Dashboard" and is currently empty.

Admin Homepage(Details): -

This screenshot shows the Admin Homepage with a more detailed sidebar. The sidebar is titled "General" and includes links for Dashboard, Users, and Category. Under "Category", there are sub-links for "Insert" and "Show". Under "Products", there are sub-links for "Insert Product" and "Show Product". Under "Orders", there are sub-links for "Show Orders". Under "Feedback", there are sub-links for "Show Feedback". The main content area is titled "Dashboard" and is currently empty. On the right side of the screen, there are two buttons: "My Profile" and "Log Out".

A large banner for Call of Duty: Warzone. It features a soldier in advanced combat gear, including a helmet and body armor, standing in a dark, industrial-looking environment with glowing red energy beams in the background. A small white button labeled 'Action' is in the top left corner. Below the title 'Call Of Duty: Online' is the subtitle 'Play your way through history in the award-winning video game series.' A red price tag shows '₹ 0'. At the bottom is a red button labeled 'View Now'. Navigation arrows are visible on the left and right sides of the banner.

Tools :-

- **HTML:-**

- HTML stands for Hyper Text Markup Language.
- HTML is the standard markup language for creating Web pages.
- HTML describes the structure of a Web page.
- HTML consists of a series of elements.
- HTML elements tell the browser how to display the content.
- HTML elements label pieces of content such as "this is a heading", "this is a paragraph", "this is a link", etc.
- Syntax : <tagname> end with.. </tagname>.

- **CSS:-**

- CSS stands for Cascading Style Sheets.
- CSS describes how HTML elements are to be displayed on screen, paper, or in other media.
- CSS saves a lot of work. It can control the layout of multiple web pages all at once.
- External stylesheets are stored in CSS files.

- **JavaScript:-**

- JavaScript is a dynamic computer programming language. It is lightweight and most commonly used as a part of web pages, whose implementations allow client-side script to interact with the user and make dynamic pages. It is an interpreted programming language with object-oriented capabilities.

- **Bootstrap:-**

- Bootstrap is a free front-end framework for faster and easier web development.
- Bootstrap includes HTML and CSS based design templates for typography, forms, buttons, tables, navigation, modals, image carousels and many other, as well as optional JavaScript plugins.
- Bootstrap also gives you the ability to easily create responsive designs.

- **PHP:-**

- PHP is an acronym for "PHP: Hypertext Preprocessor".
- PHP is a widely-used, open source scripting language.
- PHP scripts are executed on the server.
- PHP is free to download and use.
- What can php do?
- PHP can generate dynamic page content.
- PHP can create, open, read, write, delete, and close files on the server.
- PHP can collect form data.
- PHP can send and receive cookies.
- PHP can add, delete, modify data in your database.
- PHP can be used to control user-access.
- PHP can encrypt data.

- **MySQL:-**

- MySQL is a relational database management system.
- MySQL is open-source.
- MySQL is free.
- MySQL is ideal for both small and large applications.
- MySQL is very fast, reliable, scalable, and easy to use.
- MySQL is cross-platform.
- MySQL is compliant with the ANSI SQL standard.
- MySQL was first released in 1995.
- MySQL is developed, distributed, and supported by Oracle Corporation.
